

Denis Gabriel Craciun

Software Developer

Profile

Developer, born on the 18th June 2002, always looking forward to improving. Strong attention to detail, and no problem working under pressure. Easy going when in collaborative environment while still focused on achieving high-quality results. Fast learner passionate about logic, maths, physics, algorithms, problem solving and the web in any kind of form since young. Eager to improve my skills and help to develop any kind of project in the best and fastest way with clean code and organised working environments. Experience tutoring Python, JavaScript and C++, both to university and college students. Native in English, Italian and Romanian.

Projects

- **eCommerce selling hand made products**

Developed with NodeJS and the Stripe API for the payments gateway. Designed in Figma and currently online at <https://handmadeandrushka.com/>

- **Dijkstra's algorithm visualisation**

Developed in JavaScript currently online on my website and available on my GitHub

- **Social network development: ElbaShare**

Developed with Flutter and currently on the PlayStore and on my GitHub, this is a social network I made for the place I live: Elba Island.

- **eCommerce API with JWT**

This is a store API made with NodeJS and MongoDB. There are all the functionalities that a common eCommerce has like searching for products, sorting them, posting, deleting, patching and more.

Functionalities are limited by a login system with JWT that allows you certain ones based on your user role.

Available on my GitHub

- **Realistic Physics Simulation**

Developed with Python and the Pymunk and Pygame modules, it is currently available on my website and the code is visible on my GitHub page.

Feel free to check out my website for more of my work!
